Malagueta21aexe. Search. Kasto. Kasto for Microsoft Windows.1. Field of the Invention The present invention relates generally to a sensor configured to provide a position measurement, and more particularly to a sensor configured to provide a position measurement using a transmitted wave. 2. Description of the Related Art An example of a known type of sensor to measure a position with a transmitted wave is shown in FIG. 6. In this example, a transmitter part 201 is configured to generate a periodic wave as a transmitted wave, for example, a pulse-modulated wave. The transmitter part 201 is also configured to send the generated transmitted wave to a receiver part 202. The receiver part 202 is configured to receive the transmitted wave from the transmitter part 201, and to determine a position based on the received transmitted wave. In the example shown in FIG. 6, the transmitter part 201 is configured to send a detected wave based on an input detected wave to the receiver part 202. The transmitted wave and the detected wave are each time-division-multiplexed on a carrier wave which has a constant frequency. The transmitter part 201 and the receiver part 202 are arranged on the same line as a wire 203, which connects the transmitter part 201 and the receiver part 202. As shown in FIG. 6, the receiver part 202 and the transmitter part 201 are connected by the wire 203 which is wound around a driving motor or a moving body. As shown in FIG. 6, when the wire 203 is wound around the driving motor or the moving body, the wire 203 becomes a motor-drive line, and as a result, the wire 203 is brought into contact with other parts, such as the driving motor or the moving body. The wire 203 may be touched by a human hand and a tool, and/or may be worn away by the driving motor. Thus, the wire 203 may become short-circuited due to the worn wire and/or the human touch, or may be damaged. As a result, the transmitted wave is not correctly received by the receiver part 202. Thus, the receiver part 202 cannot correctly measure the position based on the received transmitted wave, and the position cannot be correctly measured. In view of the above-mentioned problem, a need exists for a sensor that can measure a position with a transmitted wave with high accuracy. 82157476af
