From the list of websites I can't seem to remove the other three instances, as I don't see "Remove" as an option. How can I remove the other three instances from the list? A: I have also had this issue in the past and have used the web inspector to try and find the source. It was pretty tedious but it eventually worked for me. Click on the data source that you don't want to remove and at the bottom of the inspector there should be a button that says "Remove Data Source". Click on that button to remove that data source. Does your organization use Salesforce? Are you trying to incorporate Salesforce into your organization's security posture? If you're interested in reviewing your Salesforce security settings, this free webinar is the perfect opportunity. Presale registration ends October 13th Join me for this practical webinar.
